

LS

September 2019

NAME

ls - list directory contents

SYNOPSIS

ls [*OPTION*]... [*FILE*]...

DESCRIPTION

List information about the FILEs (the current directory by default). Sort entries alphabetically if none of **-cftuvSUX** nor **--sort** is specified.

Mandatory arguments to long options are mandatory for short options too.

-a, --all do not ignore entries starting with .

-A, --almost-all do not list implied . and ..

--author with **-l**, print the author of each file

-b, --escape print C-style escapes for nongraphic characters

--block-size=SIZE with **-l**, scale sizes by SIZE when printing them; e.g., '--block-size=M'; see SIZE format below

-B, --ignore-backups do not list implied entries ending with ~

-c with **-lt**: sort by, and show, ctime (time of last modification of file status information); with **-l**: show ctime and sort by name; otherwise: sort by ctime, newest first

-C list entries by columns

--color[=*WHEN*] colorize the output; WHEN can be 'always' (default if omitted), 'auto', or 'never'; more info below

-d, --directory list directories themselves, not their contents

-D, --direc generate output designed for Emacs' direc mode

-f do not sort, enable **-aU**, disable **-ls --color**

-F, --classify append indicator (one of * / => @|) to entries

--file-type likewise, except do not append '*'

--format=WORD across **-x**, commas **-m**, horizontal **-x**, long **-l**, single-column
-1, verbose **-l**, vertical **-C**

--full-time like **-l --time-style=full-iso**

-g like **-l**, but do not list owner

--group-directories-first group directories before files;
can be augmented with a **--sort** option, but any use of **--sort=none (-U)** disables grouping

-G, --no-group in a long listing, don't print group names

-h, --human-readable with **-l** and **-s**, print sizes like 1K 234M 2G etc.

--si likewise, but use powers of 1000 not 1024

-H, --dereference-command-line follow symbolic links listed on the command line

--dereference-command-line-symlink-to-dir follow each command line symbolic link
that points to a directory

--hide=PATTERN do not list implied entries matching shell PATTERN
(overridden by **-a** or **-A**)

--hyperlink[=WHEN] hyperlink file names; WHEN can be 'always' (default if omitted), 'auto', or 'never'

--indicator-style=WORD append indicator with style WORD to entry names: none (default), slash (**-p**), file-type (**--file-type**), classify (**-F**)

-i, --inode print the index number of each file

-I, --ignore=PATTERN do not list implied entries matching shell PATTERN

-k, --kilobytes default to 1024-byte blocks for disk usage; used only with **-s** and per directory totals

-l use a long listing format

-L, --dereference when showing file information for a symbolic link, show information for the file the link references rather than for the link itself

-m fill width with a comma separated list of entries

-n, --numeric-uid-gid like **-l**, but list numeric user and group IDs

-N, --literal print entry names without quoting
-o like **-l**, but do not list group information
-p, --indicator-style=*slash* append / indicator to directories
-q, --hide-control-chars print ? instead of nongraphic characters
--show-control-chars show nongraphic characters as-is (the default, unless program is 'ls' and output is a terminal)
-Q, --quote-name enclose entry names in double quotes
--quoting-style=*WORD* use quoting style *WORD* for entry names: literal, locale, shell, shell-always, shell-escape, shell-escape-always, c, escape (overrides QUOTING_STYLE environment variable)
-r, --reverse reverse order while sorting
-R, --recursive list subdirectories recursively
-s, --size print the allocated size of each file, in blocks
-S sort by file size, largest first
--sort=*WORD* sort by *WORD* instead of name: none (**-U**), size (**-S**), time (**-t**), version (**-v**), extension (**-X**)
--time=*WORD* with **-l**, show time as *WORD* instead of default modification time: atime or access or use (**-u**); ctime or status (**-c**); also use specified time as sort key if **--sort=time** (newest first)
--time-style=*TIME_STYLE* time/date format with **-l**; see TIME_STYLE below
-t sort by modification time, newest first
-T, --tabsize=*COLS* assume tab stops at each *COLS* instead of 8
-u with **-lt**: sort by, and show, access time; with **-l**: show access time and sort by name; otherwise: sort by access time, newest first
-U do not sort; list entries in directory order
-v natural sort of (version) numbers within text
-w, --width=*COLS* set output width to *COLS*. 0 means no limit
-x list entries by lines instead of by columns
-X sort alphabetically by entry extension
-Z, --context print any security context of each file
-1 list one file per line. Avoid '\n' with **-q** or **-b**
--help display this help and exit

--version output version information and exit

The SIZE argument is an integer and optional unit (example: 10K is 10*1024). Units are K,M,G,T,P,E,Z,Y (powers of 1024) or KB,MB,... (powers of 1000).

The TIME_STYLE argument can be full-iso, long-iso, iso, locale, or +FORMAT. FORMAT is interpreted like in date(1). If FORMAT is FORMAT1<newline>FORMAT2, then FORMAT1 applies to non-recent files and FORMAT2 to recent files. TIME_STYLE prefixed with 'posix-' takes effect only outside the POSIX locale. Also the TIME_STYLE environment variable sets the default style to use.

Using color to distinguish file types is disabled both by default and with --color=never. With --color=auto, ls emits color codes only when standard output is connected to a terminal. The LS_COLORS environment variable can change the settings. Use the dircolors command to set it.

Exit status:

- 0** if OK,
- 1** if minor problems (e.g., cannot access subdirectory),
- 2** if serious trouble (e.g., cannot access command-line argument).
