

LS

September 2019

NAME

ls - list directory contents

SYNOPSIS

ls [*OPTION*]... [*FILE*]...

DESCRIPTION

List information about the FILES (the current directory by default). Sort entries alphabetically if none of **-cftuvSUX** nor **--sort** is specified.

Mandatory arguments to long options are mandatory for short options too.

-a, **--all** do not ignore entries starting with **.**

-A, **--almost-all** do not list implied **.** and **..**

--author with **-l**, print the author of each file

-b, **--escape** print C-style escapes for nongraphic characters

--block-size=SIZE with **-l**, scale sizes by SIZE when printing them; e.g., **'--block-size=M'**; see SIZE format below

-B, **--ignore-backups** do not list implied entries ending with **~**

-c with **-lt**: sort by, and show, ctime (time of last modification of file status information); with **-l**: show ctime and sort by name; otherwise: sort by ctime, newest first

-C list entries by columns

--color[=WHEN] colorize the output; WHEN can be **'always'** (default if omitted), **'auto'**, or **'never'**; more info below

-d, --directory list directories themselves, not their contents
-D, --dired generate output designed for Emacs' dired mode
-f do not sort, enable **-aU**, disable **-ls --color**
-F, --classify append indicator (one of */=>@|) to entries
--file-type likewise, except do not append '*'
--format=WORD across **-x**, commas **-m**, horizontal **-x**, long **-l**, single-column **-l**,
 verbose **-l**, vertical **-C**
--full-time like **-l --time-style=full-iso**
-g like **-l**, but do not list owner
--group-directories-first group directories before files;
 can be augmented with a **--sort** option, but any use of **--sort=none (-U)**
 disables grouping
-G, --no-group in a long listing, don't print group names
-h, --human-readable with **-l** and **-s**, print sizes like 1K 234M 2G etc.
--si likewise, but use powers of 1000 not 1024
-H, --dereference-command-line follow symbolic links listed on the command
 line
--dereference-command-line-symlink-to-dir follow each command line symbol-
 ic link
 that points to a directory
--hide=PATTERN do not list implied entries matching shell PATTERN (overrid-
 den by **-a** or **-A**)
--hyperlink[=WHEN] hyperlink file names; WHEN can be 'always' (default if
 omitted), 'auto', or 'never'
--indicator-style=WORD append indicator with style WORD to entry names:
 none (default), slash (**-p**), file-type (**--file-type**), classify (**-F**)
-i, --inode print the index number of each file
-I, --ignore=PATTERN do not list implied entries matching shell PATTERN
-k, --kibibytes default to 1024-byte blocks for disk usage; used only with **-s** and
 per directory totals
-l use a long listing format
-L, --dereference when showing file information for a symbolic link, show informa-
 tion for the file the link references rather than for the link itself

- m fill width with a comma separated list of entries
- n, --numeric-uid-gid like -l, but list numeric user and group IDs
- N, --literal print entry names without quoting
- o like -l, but do not list group information
- p, --indicator-style=*slash* append / indicator to directories
- q, --hide-control-chars print ? instead of nongraphic characters
- show-control-chars show nongraphic characters as-is (the default, unless program is 'ls' and output is a terminal)
- Q, --quote-name enclose entry names in double quotes
- quoting-style=*WORD* use quoting style WORD for entry names: literal, locale, shell, shell-always, shell-escape, shell-escape-always, c, escape (overrides QUOTING_STYLE environment variable)
- r, --reverse reverse order while sorting
- R, --recursive list subdirectories recursively
- s, --size print the allocated size of each file, in blocks
- S sort by file size, largest first
- sort=*WORD* sort by WORD instead of name: none (-U), size (-S), time (-t), version (-v), extension (-X)
- time=*WORD* with -l, show time as WORD instead of default modification time: atime or access or use (-u); ctime or status (-c); also use specified time as sort key if --sort=*time* (newest first)
- time-style=*TIME_STYLE* time/date format with -l; see TIME_STYLE below
- t sort by modification time, newest first
- T, --tabsize=*COLS* assume tab stops at each COLS instead of 8
- u with -lt: sort by, and show, access time; with -l: show access time and sort by name; otherwise: sort by access time, newest first
- U do not sort; list entries in directory order
- v natural sort of (version) numbers within text
- w, --width=*COLS* set output width to COLS. 0 means no limit
- x list entries by lines instead of by columns
- X sort alphabetically by entry extension
- Z, --context print any security context of each file

-1 list one file per line. Avoid '\n' with **-q** or **-b**

--help display this help and exit

--version output version information and exit

The **SIZE** argument is an integer and optional unit (example: 10K is 10*1024). Units are K,M,G,T,P,E,Z,Y (powers of 1024) or KB,MB,... (powers of 1000).

The **TIME_STYLE** argument can be full-iso, long-iso, iso, locale, or +FORMAT. **FORMAT** is interpreted like in date(1). If **FORMAT** is **FORMAT1**<newline>**FORMAT2**, then **FORMAT1** applies to non-recent files and **FORMAT2** to recent files. **TIME_STYLE** prefixed with 'posix-' takes effect only outside the POSIX locale. Also the **TIME_STYLE** environment variable sets the default style to use.

Using color to distinguish file types is disabled both by default and with **--color=never**. With **--color=auto**, ls emits color codes only when standard output is connected to a terminal. The **LS_COLORS** environment variable can change the settings. Use the **dircolors** command to set it.

Exit status:

0 if OK,

1 if minor problems (e.g., cannot access subdirectory),

2 if serious trouble (e.g., cannot access command-line argument).
